

# BLAG

## Light Paper v1.0

BLAG It is the official cryptocurrency of the currently active [BLAG.IONFT](#) Marketplace and the **BLAG Metaverse**, which will be available on the Scheduled date.

Our team has foreseen the following objectives while planning the development of \$BLAG;

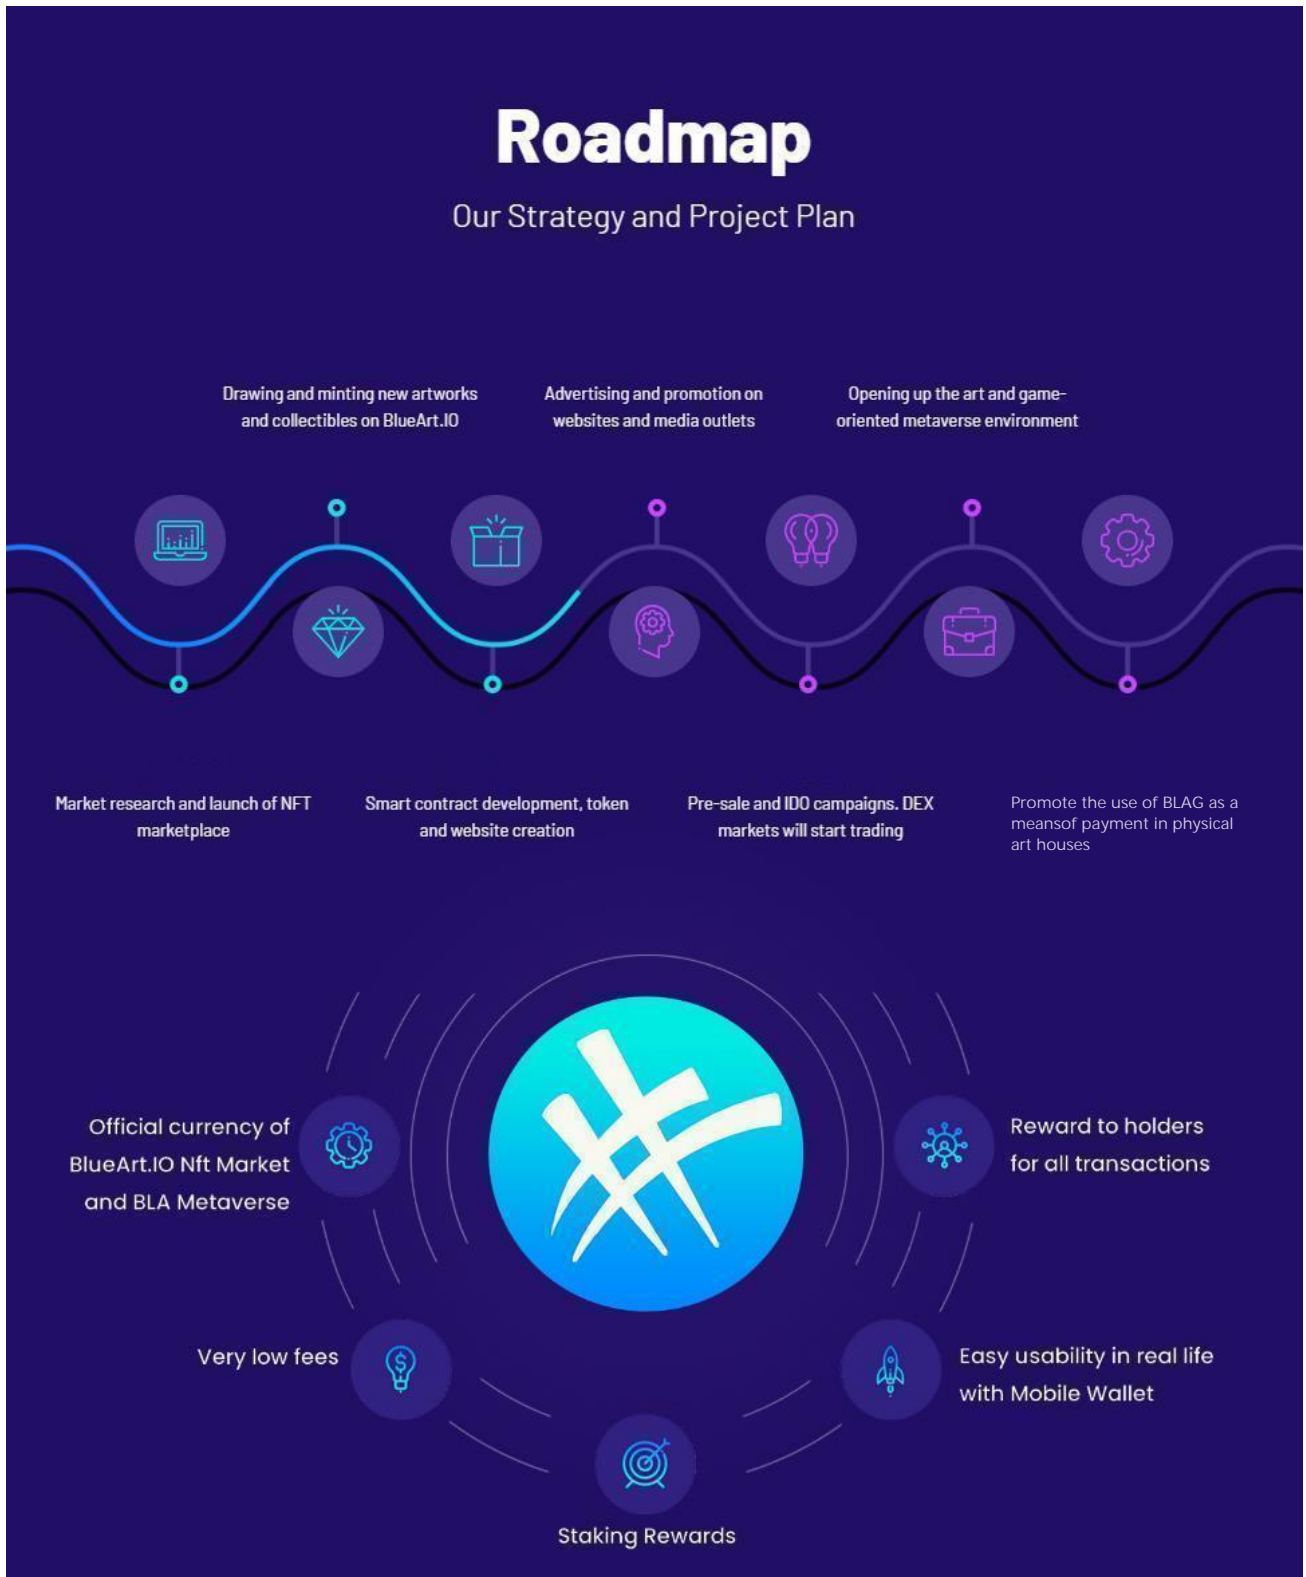

- Recognition as a trusted currency on art-based digital platforms (Primarily BLAG)
- Using as a means of payment in the trade of physical works of art
- Use as a mass money transfer tool with a mobile wallet
- Evaluation as an asset traded on the stock exchanges

It works as a BEP20 token on Binance Smart Chain. It has a maximum supply of 88 million. It works in a deflationary structure. 2% of each transfer is automatically distributed to charities and 3% to wallets holding tokens. Non-routine planned burning will be applied (10%). Increasing the supply of \$BLAG is technically impossible as this feature has been canceled in the smart contract. The maximum supply will never increase, but will constantly decrease with regular manual burnings.

Our current roadmap according to LightPaper v1.

(Note: Our roadmap will be updated by adding new targets and developments regularly.)

## BLAG NFT Marketplace

Digital marketplace with limited number of unique nft artworks. BLAG is curated by Binance NFT's best-selling individual artist and our founder Murat (@artistmurati)

It is very easy to use, you can watch a user [experience video here](#).

## Frequently Asked Questions (FAQ)
